

WhitePaper

Project

AODGames is a new Dapp inspired to the Netflix SquidGames serie.

It is based on the AOD Tokens that will be used as tickets to take part in the game.

One Game will be played against the contract, if you survive you will get the prize (contract balance).

The Token

AOD Tokens can be bought from the homepage during the ICO.

(20% of the paid amount will be taken as devs fees to pay platform development, smart contract deployment fees and hosting)

The price will increase every day by 20% of the initial value (doubled every 5 days).

You can buy a single Token to take part in the game or buy more to trade them when they will reach an higher price.

The Game

Once all tokens will be sold there will be a week to trade tokens between players.

After this week the Game will start and everyone can play only one time burning 1 AOD Token.

The Game will stay open for 1 week.

Once the week will be over the Game is ended.

If you have won, you'll be able to withdraw the prize.

The Withdraw

Once the Game is ended, the total prize (entire contract balance) will be divided for the number of winners.

Each winner will be able to withdraw its part.

Safe Harbour

The ICO and Game contract will be published on bscscan.com, so everyone can check it and verify its fairness. For this reason non audit will be done.

Use only the money you can effort to lose.
